

Maintain Active Medication List

More than 80% of unique patients seen by the physician in the reporting period should have at least one medication entry entered as structure data.

How to meet this measure using ONCOCHART –

Enter all medications into ePrescribe. If the patient has no active medications, add a placeholder drug named “No active medications” to your ePrescribe favorites then choose this as your prescribed or outside medication. Check to see if this “No active medications” entry is already in your favorites.

Contact ONCOCHART Support for more information regarding.
