

## Clinical Summaries

Provide a clinical summary for more than 50% of each *office visit* within three business days of the date of the physician office visit narrative. An office visit is a separate, billable event that results from evaluation and management services proved to the patient. In ONCOCHART an office visit includes an Initial Evaluation (INI) and a Follow-Up note (FUE) and any E&M narrative that generates a 99\*\*\* CPT. An office visit also includes any custom narrative marked as Office Visit in the narrative builder. You can generate a clinical summary using one or more of these methods.

### How to meet this measure using ONCOCHART –

There are a few methods to meet this measure.

- *Open a patient chart > EMR > Continuity of Care > Left clicking Clinical Document Architecture > Print.* This needs to be done for 50% office visits within one business day of the narrative date of service. If your printer has the capabilities, you can *print* this document to a PDF file then provide it to the patient.
- If you have the patient portal enabled at your practice **and** the patient has authorized you to send documents to his/her patient portal, ONCOCHART will automatically send the patient a clinical summary every time an office visit is signed by the physician. *Contact ONCOCHART support for more information regarding the patient portal.*
- Answer the ***Clinical summary provided*** question on the INI and FUE. On the INI, the question is on the *MDM Diagnosis/Management Options* tab. On the FUE, the question is on the *Med. Decision Making* tab. If you choose to use this method, you will not be required to use the EMR or patient portal method for calculation purposes, but you will be responsible for providing the patient with a clinical summary.
