

Summary of Care (Transition of Care)

The EP that transitions or refers their patient to another setting of care or provider of care provides a summary of care record for more than 50% of transitions of care and referrals.

How to meet this measure using ONCOCHART -

You can get credit for providing a summary record by using one of the following methods.

- After answering YES to the Transitioned question in the INI, FUE and EOT, answer NO to the pop-up. You'll also need to answer the *Released Explanation* question. If you choose to use this method, you will not be required to use the patient portal method or print the transition of care record *for MU calculation purposes, but you will be responsible for providing the patient with a transition of care summary.*

You can manually generate a summary of care record by going to *EMR > Continuity of Care > Clinical Document Architecture*

- You can decline printing the transition of care summary and not answer the Released Explanation question and still get credit in the MU calculator *if the patient has authorized you to send health information to his/her patient portal. Contact ONCOCHART support for more information regarding the patient portal.*
