

Medication Reconciliation

The EP who receives a patient from another setting of care or provider of care or believes an encounter is relevant should perform medication reconciliation for more than 50% of those transitions.

How to meet this measure using ONCOCHART -

Perform the medication reconciliation and notate this in the INI: *INI > Allergy/Rx/Chemo > Reconciliation > Med Reconciliation MU*.

The screenshot shows the ONCOCHART interface with a navigation bar at the top containing 'Demographics', 'Problem', 'Past Hist', and 'Allergy/Rx/Chemo'. Below this is a vertical list of buttons: 'Allergies', 'Outside Meds', 'RX Written Here', 'Reconciliation' (highlighted in blue), 'Chemotherapy', and 'PQRS 130 Meds'. To the right, a 'Medication Reconcilia...' dropdown menu is open, showing the text '*Med Reconciliation MU' and a list of options: 'Yes' and 'No'.
