

Family Health History

Record patient family health history as structured data for more than 20% of all unique patients seen by the EP during the EHR reporting period. This data must be for one or more first-degree relatives. CMS defines first-degree relatives as parents, offspring and siblings.

How to meet this measure using ONCOCHART -

Go to *Information Center > Problem List - Family > Add Problem.**

Select a *Relationship to Patient*. Select a *Code Type* then select/search for the *condition*. Feel free to fill in the remaining information if it is available. Click OK.

If a family problem is unknown, add the SNOMED code 407559004 to the family problem list.

*If the *Problem List – Family* module isn't present in your information center, you'll need to add the module.

Adding a module to the Information Center

PATIENT MODULE SETTINGS

Select the modules that you would like to display on the Patient Information Center.
Click and drag to reorder modules.
