

Record Smoking Status

More than 80% of all unique patients 13 years old or older seen by the EP have smoking status recorded as structured data.

How to meet this measure using ONCOCHART - You can record the smoking status of a patient in an INI and an FUE under the *Social History* tab and under the *MU Smoking Query* group.

The screenshot displays the ONCOCHART interface with the 'Social History' tab selected. On the left, a vertical list of topics includes 'MU SmokingQuery', which is highlighted with a red rectangle. Other topics in the list include 'Edu Hist', 'Measure #173', 'Work Hist', 'Notes', 'Exercise Hist', 'Hazard Occup', 'Personal Info', 'Substance Abuse', 'Tobacco Use', 'Measure #226', and 'Alcohol Use'. At the bottom of this list are buttons for 'Select', 'Select All', 'Clear Topic', and 'Skip and Move to Next Topic'. On the right, a dropdown menu for '*Smoking Status' is open, showing a list of options: 'Current every day smoker', 'Current some day smoker', 'Former smoker', 'Never smoker', 'Smoker, current status unknown', 'Unknown if ever smoked', 'Light smoker', and 'Heavy smoker'. The 'Current every day smoker' option is currently selected.
