

Medication Reconciliation

The EP who receives a patient from another setting of care or provider of care or believes an encounter is relevant should perform medication reconciliation for more than 50% of those transitions.

How to meet this measure using ONCOCHART -

Provider may claim an exclusion for the measure of the Stage 2 Medication Reconciliation objective if for an EHR reporting period in 2015 they were scheduled to demonstrate Stage 1 but did not intend to select the Stage 1 Medication Reconciliation menu objective.
