

Medication Reconciliation

The MIPS eligible clinician performs medication reconciliation for at least 1 transition of care in which the patient is transitioned into the care of the MIPS eligible clinician.

How to meet this measure using ONCOCHART -

Perform the medication reconciliation process **and** document you've done this in the INI: *INI > Allergy/Rx/Chemo > Reconciliation > Med Reconciliation MU* .

The screenshot shows a software interface with a top navigation bar containing tabs for "Demographics", "Problem", "Past Hist", and "Allergy/Rx/Chemo". Below the tabs is a vertical list of buttons: "Allergies", "Outside Meds", "RX Written Here", "Reconciliation" (highlighted in blue), "Chemotherapy", and "PQRS 130 Meds". To the right, a window titled "Medication Reconcilia..." is open, displaying the text "*Med Reconciliation MU" above a dropdown menu. The dropdown menu is currently open, showing the options "Yes" and "No".
